AquaTec Decaners Have The Best Design Features!

AquaTec decaners are the only choice for SBR systems if low BOD and low effluent solids are required. No other decanter can offer the same efficiency. Their reliability in all weather & process conditions is unparalleled.

This AquaTec decanter is performing flawlessly in a municipal plant where a competitive decanter failed to achieve state and federal effluent standards for nutrients, BOD, and S.S.

This AquaTec decanter is shown operating in sub-zero conditions in an AquaTec SBR system designed for treatment of high strength dairy waste. It operates flawlessly and constantly produces high quality effluent.
